

# Nice and Simple - my150X

With a design that is almost identical to the my220X, this handset is its simpler cousin. Sagem has taken out some power-tools and stripped back this handset to deliver a bare-basics package.

The my150X is super thin at 10 mm. Like Sagem's my220X, it has a metallic border curving around it and a soft-touch finish. With blue backlighting and a keypad lined with dark red, it has a graceful, pleasant design.

Its screen is large and displays vibrant shades of blue on a black background. This colour combination is soothing, which might please children. An older demographic,

raised on old-school Apple Macs, might also be reassured by this monotone use of colour.

With a games menu consisting of a calculator and calendar, it's clear that functions have been really pared back. Calling and SMS are the only things that this handset has been built for. They're pretty easy to get a handle on using a clear-cut menu composed of lit dots.

## Impression

A cheap-as-chips handset that has been whittled down to wafer thin, Sagem's my150X is made for consumers who just want a phone. It is useful for allowing kiddies or the olds to keep in contact.
