

Shiny Next G

After launching Shine in the general market, LG is now releasing an updated Telstra Next G version.

We've covered the original Shine model in previous editions so the focus here is on changes from the original product

Look & Feel

The Next G shine is stylish and weighty thanks to a metal finish. The colour is now gun metal grey rather than silver.

Another change is swapping the scroll bar for a mouse style navi-key. The RAZR-esque keypad is continued, as is a 2 Megapixel camera with photo light.

The package comes together well, with a large wide screen which makes Mobile FOXTEL look good, especially in wide screen, landscape mode.

Faster data speeds are now possible thanks to an upgrade in that department, helping make Mobile FOXTEL and Bigpond TV look smooth.

A microSD slot has also been added, particularly good for storing music.

Impression

LG's TU720 is another model helping Telstra beef up their range of handsets in time for Christmas. Until a few months ago the depth and breadth of the Next G range was relatively limited, but now customers are spoilt for choice.
